

Press Release to NPE 2018 Cost-effective Processes and innovative Technologies.

Pad Print and the Laser Individualization have been for decades the strength of TAMPOPRINT AG. Thanks to this Know-How high-definition labeling, scaling and decorating are made possible, where other procedures reach their limits. As a solid and reliable partner the TAMPOPRINT AG leads their products to success.

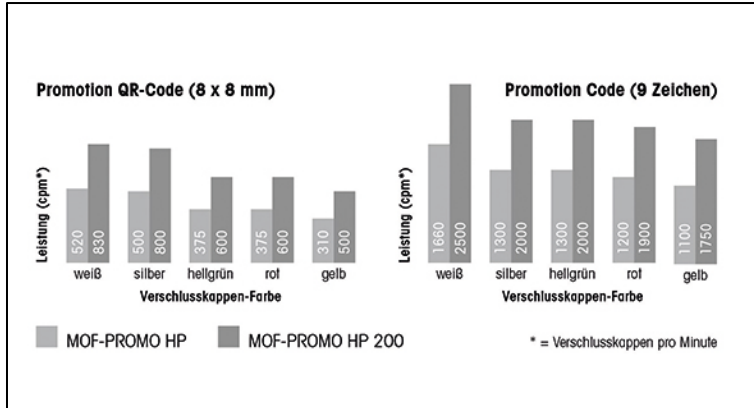

At the NPE 2018 the TAMPOPRINT AG presents, apart from the established machines, also innovations – from Pad Print Standard Machines up to Full Automation.

With the MOF-PROMO HP 200 TAMPOPRINT AG presents the newest technical expansion of the reliable "Mark-on-the-fly" Laser Labeling Machine Series. Outfitted with a powerful Fiber-Laser the machine achieves an output capacity of up to 2500 closure caps per minute. The additional incurred costs for special and necessary laser pigments (additives) in the plastic can be saved by up to 60%, without downgrading the high-contrast and very good readability of the marking. This also applies to difficult to mark plastic colours, e.g. blue, red and green.

As an additional innovation TAMPOPRINT AG will also exhibit at the NPE 2018 the new Laser Software ALFALAS® Laser Suite. One of the greatest advantages of permanent laser marking is the security against manipulation – therefore an aspect stood notably in the foreground: The Data Security. Hereto the Software ALFALAS® Laser Suite utilizes a special encryption procedure and therewith protects your data from unauthorized access.

Depending on application, individualization processes can be fitted as per customers' requirements. Even high-complex challenges can be solved.

Visit us at the NPE 2018 in Orlando, Florida USA, in the West Hall Level 2, Hall D, Booth 4867 and experience Live the diverse Machine World of the TAMPOPRINT AG.

Meta titel: TAMPOPRINT at the NPE 2018

Keywords: NPE 2018, further development, innovation, MOF-PROMO HP 200, high production efficiency

Meta description: At the NPE 2018 the TAMPOPRINT AG presents a further development of the MOF-PROMO HP for the decoration of closure caps. As an additional innovation the software ALFALAS® Laser Suite will be presented where all data are protected against manipulation using an encryption procedure. Exhibition booth: West Hall Level 2, Hall D, Stand 4867.

Company information:

The TAMPOPRINT AG is a mid-sized special engineering company with 60 years of business tradition. The headquarters with about 170 employees is located in South-West Germany, in the vicinity of Stuttgart. TAMPOPRINT is the inventor of the industrial Pad Print and is regarded as the system-solver and enabler of complex tasks in the entire industry for pad print and laser individualization. The spectrum reaches from the development of machines for decoration and marking of technical products to lifestyle articles. Furthermore, there are hardly restrictions for the application or combination of both processes. It is almost immaterial on which material to print or on which surface.
