

Pharmapack 2017 – Industry Leaders among themselves.

The Pharmapack 2017 in Paris belongs to the most important venues of the medical industry. With the visit of the TAMPOPRINT AG at the exhibition, the company emphasizes the importance of the pad print and the laser individualisation for the pharmaceutical industry. Concretely in focus: In no other industry, exact scales and durable product labelling have an approximately so essential function.

The trust from the international industry leaders proves clearly that TAMPOPRINT fulfills these challenges. No matter if ampoules, syringe cartridges or dosage counting rings: Integrated marking solutions perfect for upstream and downstream processes are worldwide in use. TAMPOPRINT early on promoted the ISO-Certification of the production processes for printing inks, printing pads and pad printing clichés. Furthermore, the company profits from the 60-year tradition in machine engineering.

So, the focus starts already at the construction, sensible handling and meticulous transport. In short: Nothing stands in the way for the safe and versatile application of TAMPOPRINT system solutions in the medical industry.

The strength of the specialist for pad print and laser individualisation lays with the optimal linkage of all competencies. Therewith are individual markings, e.g. with QR-Codes for precise product tracing easily implemented. Markings can flexibly be featured and adapted to changing products. The TAMPOPRINT AG achieves this with the Modular Automation Platform (MAP); compact outside measurements and user-friendly handling made this system so desirable. In a word: The MAP belongs to the TAMPOPRINT star products of the recent years and is a perfect integrated automation for the overall process.

At the Pharmapack, TAMPOPRINT will use the opportunity to promote the pad print and its flexible applications. Moreover, high-class trade professionals are expected to visit Booth B17 in Hall 4.

insulinpen_l.jpg

Quality of life: Thanks to pad printing a safe and accurate insulin injection is possible.

laser-individualisierung_l.jpg

Product individualization: The combination of pad printing and laser technology allows a rapid and safe product individualization.

medical-parts_l.jpg

Manifold system solutions: Whether flat or round: The accurate marking and labeling will be permanently applied.

Company information:

The TAMPOPRINT AG is a mid-sized special engineering company with 60 years of business tradition. The headquarters with about 170 employees is located in South-West Germany, in the vicinity of Stuttgart. TAMPOPRINT is the inventor of the industrial Pad Print and is regarded as the system-solver and enabler of complex tasks in the entire industry for Pad Print and Laser-Individualization. The spectrum reaches from the development of machines for decoration and marking of technical products to lifestyle articles. Furthermore, there are hardly restrictions for the application or combination of both processes. It is almost immaterial on which material to print or on which surface.
